BERTHOLD MARX serving Industry

Created in 1945, the company BERTHOLD MARX supplied industrial body shells to the automotive market, spare parts, as well as various consumables.

After more than 30 years developing in this sector, it was in the 70s, that it became keenly interested in a new component that had just appeared on the market: «**The gas spring**».

The gas spring was created to respond to the issue of weight resulting from the hatchback produced by French car manufacturers. The hatchback now had to incorporate a window which up to then it had not. The gas spring is an essential component of this assembly which enables light and easy handling of the hatchback.

The gas spring therefore became «the» part around which the entire company strategy was developed, to the point of a new Gas Spring production plant being established in 2003.

This has enabled the company's range to be extended to all sectors with the need to compensate, fully or partly for a weight, independently, and releasing products adapted to the needs of customers.

With the aim of having a consistent and targeted range of products on the market, BERTHOLD MARX has solely kept in its catalogue all products directly linked to applications with gas springs (rubber sections and seals, silent blocs, etc.)

Version 2015

Gas Spring safety protocol

Gas springs are devices containing nitrogen and oil under pressure. This pressure may reach more than 160 bar.

Observe the following precautions:

- Do not subject the gas springs to impacts, vibrations or electrical or magnetic fields.
- Do not expose the gas springs to a temperature exceeding 80°C.
- The rod must remain free of any impurities, splashes, paint, adhesive, solvent or corrosive product.
- Do not force a gas spring with a blocked rod (see Neutralisation section below)
- Do not damage the body of the gas spring (notches, abrasions, cuts) as this may weaken the resistance of the body or an internal component.
- Do not remove the gas spring from the application as the rod is engaged in the body, without having neutralised its beforehand (unless it is completely open, with the rod out).
- Check that the gas spring is not subjected to lateral forces
- Leave a clearance of 0.5 to 1 mm between the gas spring ends and the application's mounting axis in order to enable the welded eyes to rotate on their axes during operation
- Gas Springs must be installed with piston rod pointing down (min. angle of 15°/horizontal)

Neutralising a gas spring:

To neutralise a gas spring, the pressure in its body needs to be released. This operation is necessary before disposing of them or before removing them when they are in the retracted rod position, you need to carry out the following (wear safety goggles and safety gloves):

- Lock the application if the gas spring is still in position.
- Gently lock the gas spring in a vice if it can be removed from the application.
- Use a metal hand saw to carefully saw the gas spring body in an area of between 20 mm and 30 mm from the bottom of the tube (side opposite the spring rod).
- Cover the saw blade in a cloth in order to prevent projections of iron parts or oil.
- When you hear the gas escaping (whistling sound) stop sawing and wait for all the gas to escape from the body.
- Degassing is complete when the rod can be moved without restriction. If this is not the case, make a second notch at the front of the tube (40 mm from the front).
- When disposing of the gas spring place it in a suitable container (the components are mainly metal). The nitrogen used in the gas springs is inert and not hazardous to the environment.
- The oil must be recovered in a suitable recipient and taken to a recycling centre that accepts drained-off oil.

Definition and recommendations for usage for BM® gas springs

Important information. Please read carefully

The gas spring is not a safety component.

1 - DIMENSIONAL AND PRESSURE UNITS

All dimensions are stated in **millimetres (mm)**, all pressures/forces in **Newtons (N/F1)**, and all temperatures in **degrees Celsius (C°)**.

2 - ASSEMBLY PRECAUTIONS

Protect the rods against strikes, electrical arc flashing, grinding sparks, paint and corrosive products. Do not tighten the rods with pliers or in a vice without using protective lead, aluminium or copper jaws.

3 - CONDITIONS OF USE

Number of forward/return movements a minute: 5 maximum. For higher speeds, contact us.

- Durability level: 30,000 cycles. Loss of characteristics after endurance: 15% maximum (the level of durability varies according to the stroke and the calibration).
- Operating temperature: from -30° C to + 80° C (peak).
- Reference temperature: + 20° C force variation due to the temperature: 1% for 3°C.

4 - STORAGE CONDITIONS BEFORE USAGE

- For a maximum period of three months, the devices can be stored horizontally, in a room at ambient temperature..
- For storage over a longer period of time, or in a hot country, store vertically, with the rod downwards.

5 - WARRANTY

- 1 year from the date marked on the equipment. Example of marking: 1011 (10th week of 2011).
- To maintain the warranty, in the case where a device is repainted, the manufacturing date must remain visible..

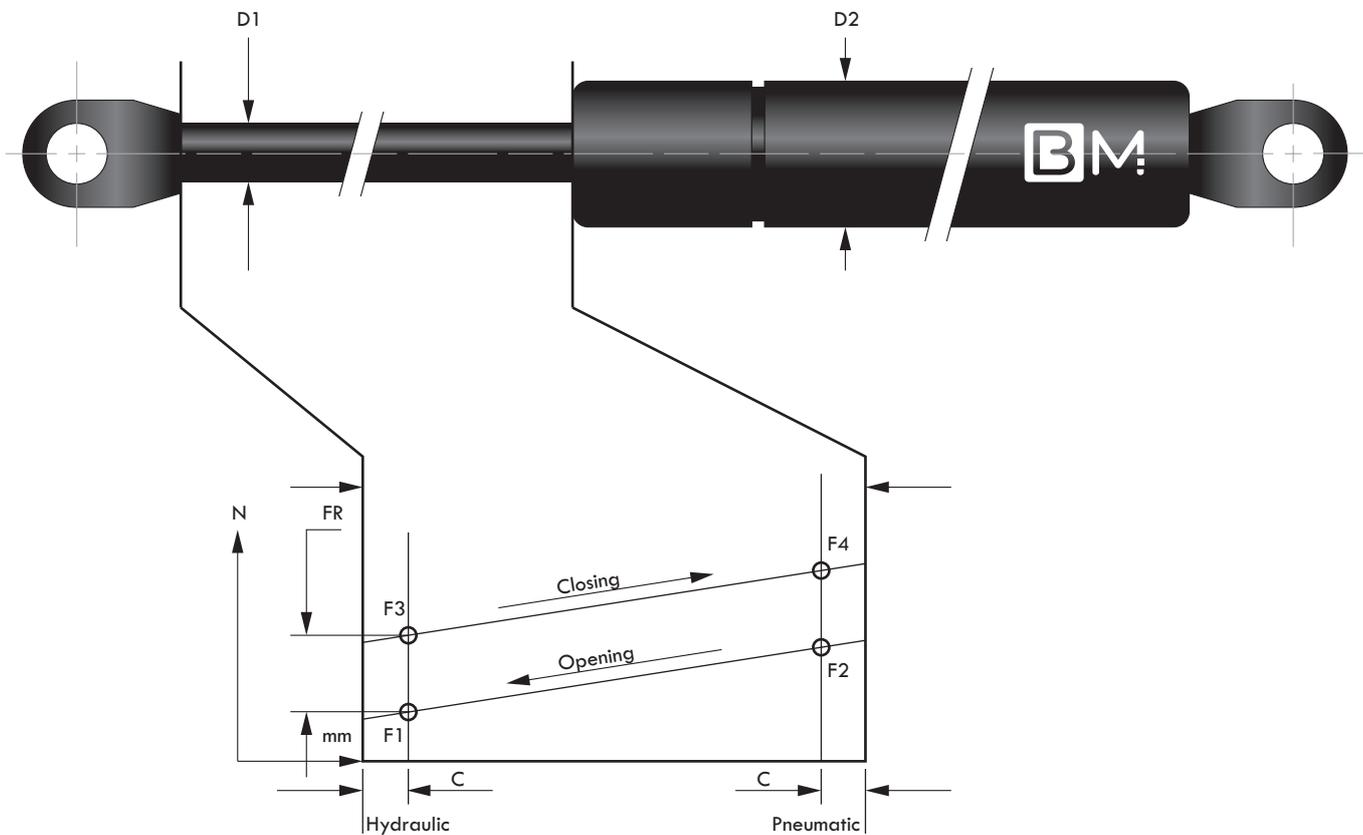

6 - TOLERANCE MARGINS

Force in Newtons	Tolerance Margin
$30 \leq N < 50$	+ ou - 10N
$50 \leq N < 250$	+ ou - 20 N
$250 \leq N < 750$	+ ou - 30 N
$750 \leq N < 1500$	+ ou - 60 N
$1500 \leq N < 3000$	+ ou - 150 N
$3000 \leq N < 6000$	+ ou - 300 N

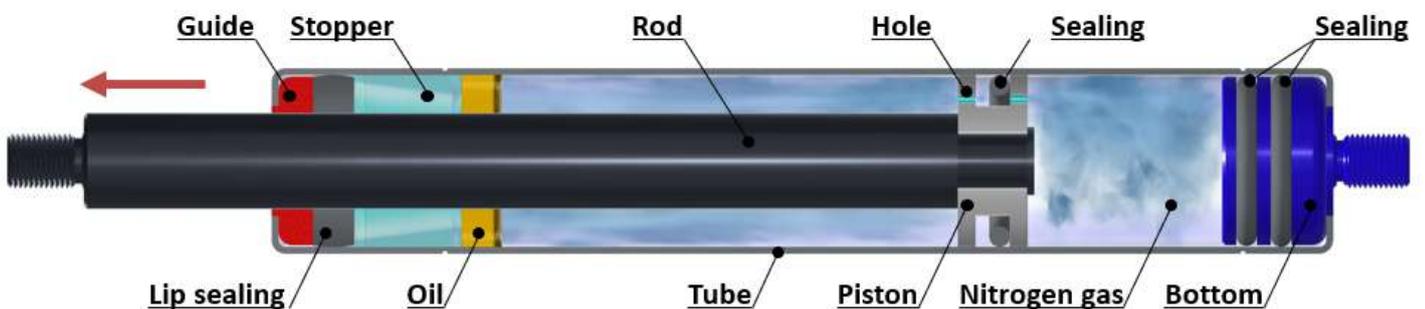

Force diagram

- The forces «F1» and «F3» are measured at the distance «C» from the ends.
- The difference between the extension force and the compression force of the spring at the same rod position is due to internal friction «FR».
- The **Progression X = F2/F1**.

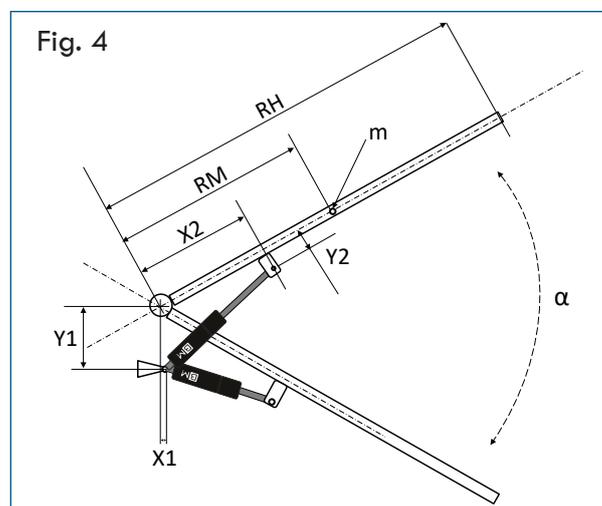

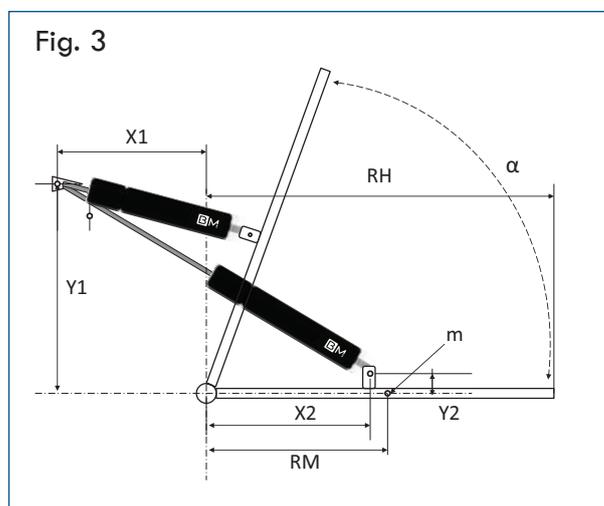

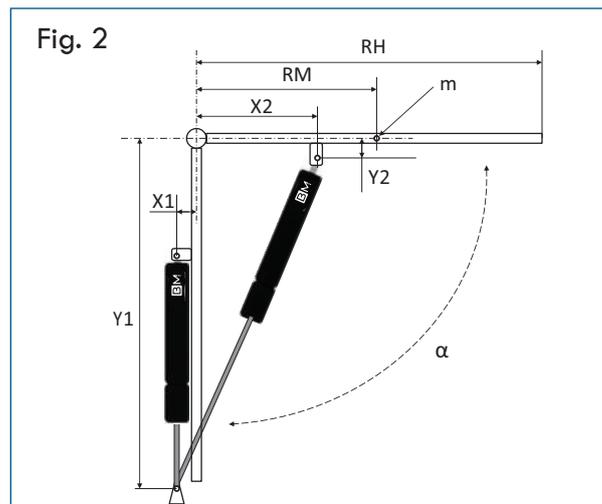

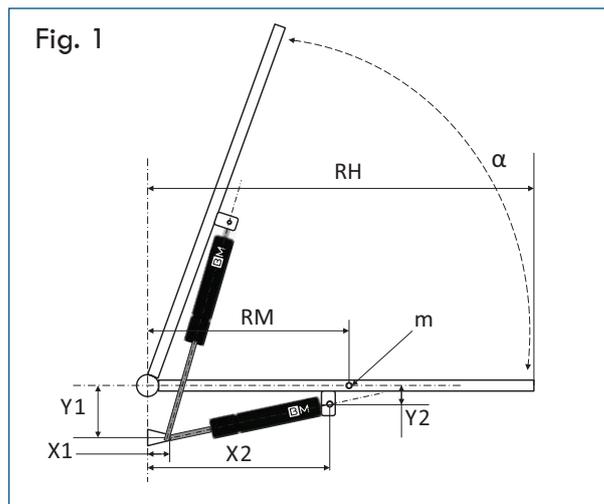

D1 (mm)	D2 (mm)	Force (F1 en N)	Max stroke (mm)	X (~)	C (mm)	Max FR (N)
6	15	400	150	1.30	5	50
8	18	750	250	1.35	5	60
10	21	1150	400	1.40	5	80
14	27	2100	500	1.50	5	150
20	40	5200	500	1.45	5	300

Compression gas spring - Diagram

Force gas spring choice guide

Gas spring - Calculation of FORCE (in Newtons) :

$$F1 \text{ (N)} = 9,81 \times \frac{RH \times m}{2 \times N \times (X2)} + 5$$

N = Number of gas springs

RH = Length of the opening in meters (M)

m = Mass or Weight of the hatch in kilos (KG)

X2 = Lever arm on meters (M)

Warning, we recommend round up to the upper tolerance the result (see page 5 tolerance range)

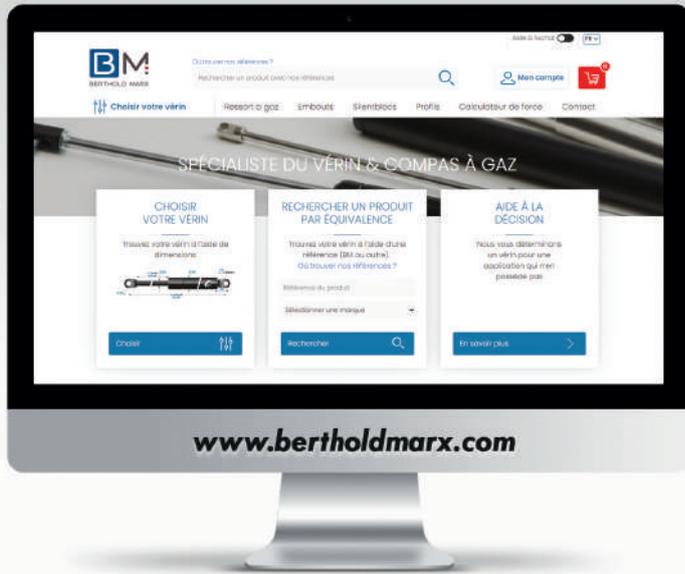

Other recommendation: The gas spring stroke has a relation with the opening angle of the hatch, and we apply ourself the following recommendation: **STROKE = 1/3 of RH for an angle of 90°**

The above recommendations are given as an indication and do not engage the responsibility of the BM company in any way, given the empirical nature of the method. This calculation method nevertheless gives good results in the majority of cases.

RELEASE VALVE TOOL

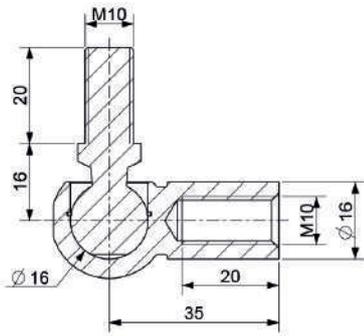

BM's valve tool is used to adapt a gas spring to your application, releasing the internal pressure by short presses on the tool until the desired pressure is reached. Can only be used on BM gas springs equipped with a release valve. Can only reduce pressure.

PROTECTION TUBE

Available for all **BM®** gas springs

Use	Protects the gas spring rod against mechanical, chemical and thermal damage. Reduce the risk of bending for long strokes.
Application	Treatment tank, manufacturing lines, polluted spaces, etc.....
Material	Steel tube
Surface	Black epoxy, galvanised or stainless steel.

WIPER RING

The new ST RAC prevents foreign matter from entering into the gas springs.

Consisting of an aluminium/NBR 90sh nitrile wiper ring, and a flexible PVC cap, it effectively repulses the dirt deposited on the rod and therefore preserves the components inside the BM gas spring. Not compatible with locking tubes or protection tubes.

Requires a gas spring with threaded ends.

DIMENSIONS AVAILABLE ACCORDING TO BM STANDARDS

Dimensions	Stroke used (mm)	Force consumed (N)	Reference
6 mm Rod 15 mm Body	7	10 à 25N	ST RAC06-15
8 mm Rod 18-19 mm Body	7.5	10 à 20N	ST RAC08-19
10 mm Rod 21-23 mm Body	8	10 à 20N	ST RAC10-23
14 mm Rod 27-28 mm Body	8.5	10 à 20N	ST RAC14-28
20 mm Rod 40 mm Body	9.5	35 à 15N	ST RAC20-40

DELIVERY WITHIN 24 TO 48H

LOCKING TUBES

Tubes can be adapted to our standard threaded gas springs depending on the dimensions.

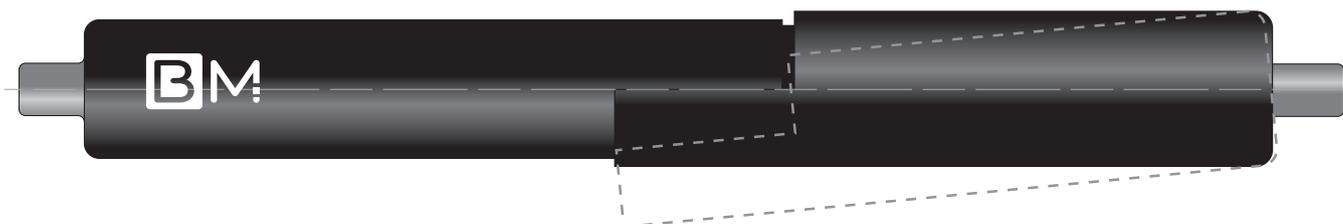

Locking tube for standard gas springs	Locking Tubes Reference

ST 450+F1 V+D14	ST TUB14450
ST 500+F1 V+D14	ST TUB14500

This locking tube ensures the gas spring is safe in the open position.

The new universal BM locking tube secure the open position of your application by locking one of the two springs in the open position. It can be unlocked by pressing the tube. Ideal for applications requiring locking in the open position.

It can be fitted to threaded BM gas springs.

 The blocking tube leads to a loss of 20 mm of the useful stroke.

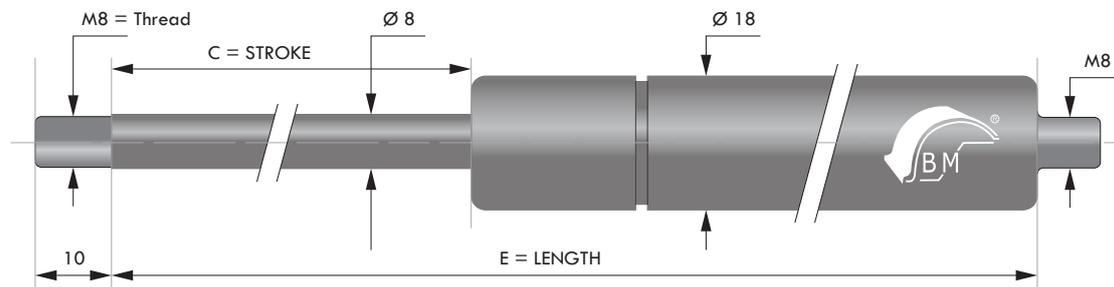

STAINLESS STEEL RANGE

Made from **316 stainless steel**, our stainless steel gas springs provide **high resistance in difficult conditions** (humidity, salty air, chemicals products, outside use, etc.) but have also a nice design looking and better performing than steel. They can enhance your products.

Made to the same dimensions as our standard steel gas springs, but all with M8 threads, they are fully compatible with everyday applications.

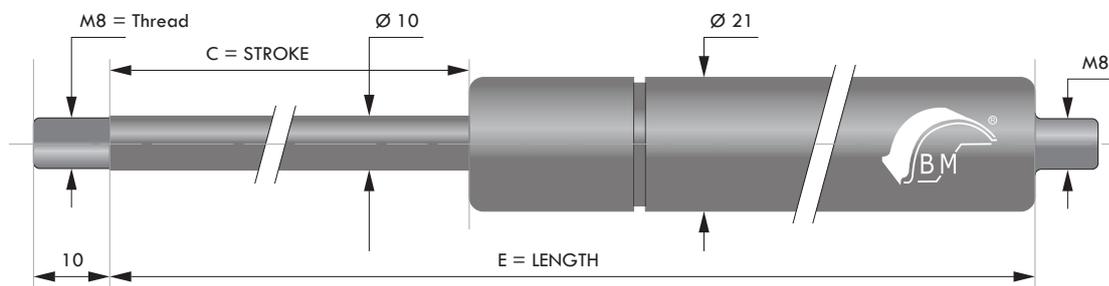

So upgrade your application at a competitive price with **Berthold Marx stainless steel springs!**

10mm / 28mm	150-1200	60-600
10mm / 40mm	200-2000	10-590
28mm / 40mm	500-5000	50-700

The options below are available on special production with threaded ends (lead time of approximately 3-5 weeks):

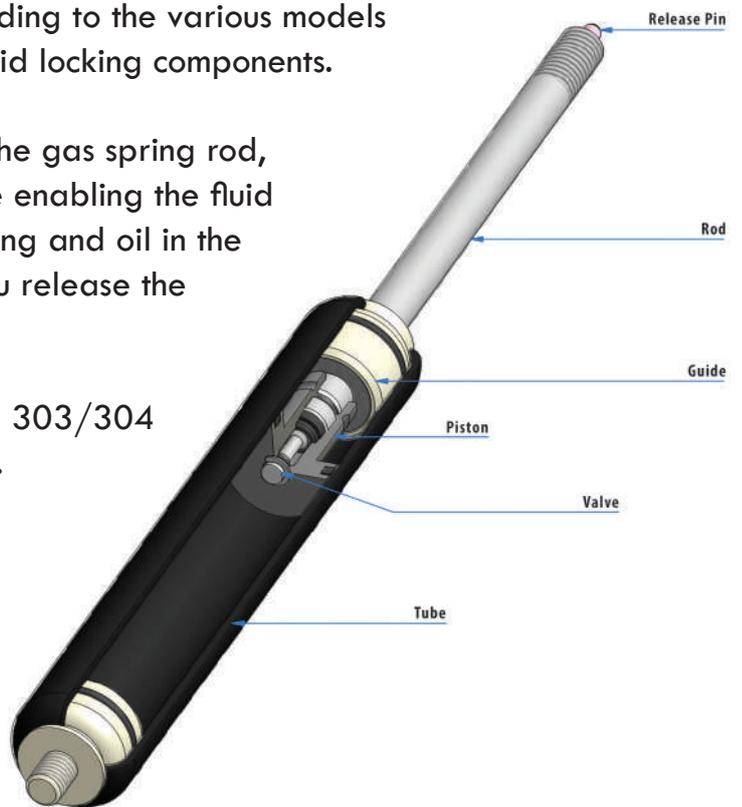

- Valve into the body thread
- Valve at 90° in the body thread
- Rod wiper ring
- Internal rod seal for locking gas spring
- Grease chamber
- Protection tube (possible on standard gas springs)
- Locking tube (possible on standard gas springs)
- Special construction for high temperatures
- Special construction for low temperatures
- Full 304 stainless steel construction (Wk 1.4305)
- Full 316 stainless steel construction (Wk 1.4571)
- Food oil inside the gas springs

SPECIAL MADE LOCKING GAS SPRINGS

BM© locking gas springs can be locked at any point along their stroke. Regardless of the application (medical beds, stretchers, lifts, etc.), you can lock and unlock the spring as required. Give your imagination free according to the various models offered in the range: Elastic, Rigid, Fully rigid locking components.

By pushing the release pin integrated into the gas spring rod, you will actuate opening of the piston valve enabling the fluid to move: nitrogen in the case of elastic locking and oil in the case of rigid locking components. When you release the pin, the spring will lock in position.

BM© gas springs may be made from steel, 303/304 stainless steel or 316L/316Ti stainless steel.

MANUFACTURE FRANCAISE
DE RESSORTS A GAZ

General Sales conditions

The warranty relating to our products only covers their exchange and can under no circumstances cover replacement costs or other costs resulting from this replacement. Any claim relating to the conformity of products, to the exclusion of any transportation dispute, must be made by recorded delivery with acknowledgement slip, within five days of the delivery date.

No returned goods shall be accepted unless explicitly authorised in writing by BERTHOLD MARX. In this instance, the goods will be sent at the Purchaser's risk and shipped carriage paid in their original packing, in perfect condition and accompanied by a return document completed by us. Any return accepted will result in a reduction in the trade-in value of the goods of at least 40% of the price excluding VAT and will result in the issue of a credit note.

The diagrams and recommendations are given for information only and cannot be considered as consisting the object of sale. They can therefore, under no circumstances, engage the liability of BERTHOLD MARX. Whatever the circumstances, it is up to the purchaser to have them confirmed by its engineering office, or its customer, or any other qualified professional service provider.

The delivery deadlines stated in the documents from BERTHOLD MARX are for illustrative purposes only and can under no circumstances engage the liability of our company, nor be the subject of penalties for delays.

In the event of a failure to collect or take delivery of goods manufactured or ordered specifically for the purchaser, within a period of eight days, after notification by registered letter with acknowledgement slip, the latter remains liable for the full sale price and associated costs of the goods.

The gas spring is not a safety component by itself and shall be supplemented by a locking system if necessary. (cf. our safety protocol available on our website www.bertholdmarx.com)

Our goods, even sold carriage paid are shipped at the consignee's risk. Special delivery arrangements can be looked into with the customer. We kindly request you to check the weight of the package upon arrival. We accept no liability for missing items or breakages linked to transportation, if reservations have not been made upon reception of the goods from the transport company.

By express agreement, failure to pay for our goods by the deadline, will result in the immediate request for all remaining sums due regardless of the method payment set out in the application, pursuant to the Penalty Clause, of a penalty equal to 15% of the due amounts.

In accordance with Law No. 80335 of 12/05/1980, this sale will only be complete after payment of the full price. For as long as the price shall not be fully paid, the goods sold will remain the property of the seller.

Regulation: The usual payment terms for customers is 30 days net from the date of the invoice, other payment terms may be considered in accordance with the current economic modernisation law in force (LME). A discount of 0.5% is available for payments within ten days. In the case of paying with a discount, the total VAT that can be recovered shall be reduced as a consequence of this

Beyond the deadline stated on the invoice, and in accordance with the law, a late penalty of a rate equal to three times the legal interest rate can be applied. A standard penalty of €40 for recovery costs will be added to the penalties which are already due for delays in payment (Decree No. 2012-1115 of 02/10/2012).

Failure by the purchaser to pay a single fraction of the price at the agreed deadline and 8 days after a formal notice, the sale concerned will be fully cancelled, at the seller's discretion.

This may also result in the appointment of an expert to observe the condition of the returned goods and to set the value; on this basis, the accounts of the parties are liquid, given the damages-interest incurred by the purchaser to complete the sale.

Only French law is applicable. In the event of a dispute, only courts and tribunals in Strasbourg have authority in the event of legal proceedings.
